DualProx® Technology

A family of PAC compatible proximity readers that open up your options

The DualProx® family of readers are a flexible and cost effective solution. They can be used for either a new access control system, expansion of an existing system or simply as replacement readers to enable a choice of tokens to be used.

DualProx® readers can read tokens and cards from a number of manufacturers including those from PAC International Limited. They offer two forms of data output, the first being PAC compatible serial data, and the other a standard 26-bit or 44-bit Wiegand data output.

Nortech offer the DualProx® technology within a choice of readers including Slimline, Panel Mount and Vandal-Resistant.

Key Features

- ◆ Reads PAC tokens and cards - including the old 153.6kHz and the new 125kHz.
- ◆ Choice of readers including slimline, panel mount and vandal-resistant.
- ◆ Simultaneous PAC and Wiegand (26 or 44 bit) data outputs.
- ◆ Choice of credentials including proximity cards and keyfobs
- ◆ Compatible with many manufacturers' Access Control systems, including those of PAC.
- ◆ Connects directly to PAC Easikey and PAC 1000, 2000, 2100 and 2200 range controllers.
- ◆ Flexible and low cost alternative to PAC readers.
- ◆ IP66 rated

Code	DualProx® Readers - Description
DP2200/P	Panel Mount DualProx® Reader with PAC serial and 26-bit or 44-bit Wiegand data outputs.
DP2200/SL	Slimline DualProx® Reader with PAC serial & 26-bit or 44-bit Wiegand data outputs.
DP2200/V	Vandal Resistant DualProx® Reader with PAC serial and 26-bit or 44-bit Wiegand data outputs.
